Bristol Street Project Achieves Another New Milestone

Improvements on the Bristol Street Project has achieved a new milestone. Striping of the newly paved section of Bristol Street between Baker Street and Randolph was completed and all median curbs have been installed.

A traffic signal was installed at the intersection of Bristol Street and Sobeca Way, at the CAMP and Pep Boys driveways.

This newly installed signal will allow for controlled crossing of pedestrians between the east and west sides of Bristol Street and improve traffic operations. Traffic engineers will be monitoring this location and adjusting the signal timing as needed to coordinate with other traffic signals in the vicinity.

Landscaping and irrigation improvements will be completed over the next four weeks.
