

Street rehabilitation work continues throughout city

Eagle Paving is well underway with the city's street rehabilitation project. The city continues to receive compliments from the community regarding the contractor's construction operations.

The street rehabilitation work includes grinding the existing asphalt concrete street and the placement of a new asphalt concrete driving surface. Last week, Eagle Paving completed improvements on several Eastside Costa Mesa streets scheduled for repair.

Work is now underway on streets located in Northside Costa Mesa. The upcoming phase of street improvements is in the central portion of the city and includes Logan Avenue, Pinecreek Drive, Village Way, Dale Way, College Avenue (Baker Street to Village Way), and Monterey Avenue (Salvador Street to El Camino Drive).

Once Eagle Paving has completed the street rehabilitation work, another contractor is scheduled to move into many of these same areas to slurry seal the remaining streets that did not require complete street rehabilitation, thus completing the street maintenance work in these neighborhoods.
